

CISEPS Seminar

Climate change economics and modeling: everything you always wanted to know (but had no one to ask)

Massimo Tavoni

PoliMi, FEEM, CMCC

May 8, 12:00pm

Building U6, room 3061

Abstract

Climate change presents us with one of the most difficult challenges, given its global, long term, uncertain nature. In most recent years, climate change economics has emerged as a prolific and interesting area, in terms of both research and policy relevance. This talk will provide an overview of climate change economics, and review the most recent findings of numerical models which integrate the energy, economy and climate components, and which form the backbone of the just published IPCC report.
